Opolskie region

OPOLSKIE
FLOURISHING OPOLSKIE REGION

Opolskie voivodship – European region in Southern Poland

Opolskie voivodship is a region that draws its strength from a multinational heritage. The most important trade routes in Central Europe crossed there their paths for centuries while local traditions were shaped by Germans, Poles and Czechs.

This extraordinary geographic position on the crossroad of different paths of cultures has a strong influence on the region from the economical aspect. Residents of Opolskie stand out for their diligence, commitment to tradition and openness to the world. Businesses generally praise the high level of work ethic, education and involvement of employees in local companies. A relatively high German minority (about 10% of the total population) also means a better connectivity to German, Austrian and Swiss markets.

Local administration and authorities have been successfully attracting investors in these years and are currently developing necessary infrastructure to attract even more. Attractive investment areas are available along A4 motorway, linking Opole with Wrocław, Katowice and Kraków, as well as the markets of Germany and Ukraine.

Opolskie voivodship enjoys a reputation among foreign investors, particularly in the food processing, chemical, metal hardware and construction sectors. According to recent analysis by Deloitte, the region can expect new investment projects in the automotive, engineering, food, glass, chemical, paper and R&D sectors.

The region is renowned for its high life standard and flourishing academic center. Local residents and investors have a wide choice of active leisure and resting options.

Construction industry in Opolskie voivodship

Manufacturing of construction machinery, concrete, alu- and steel-made products, as well as construction chemical products, interior fittings together with construction services are fundamental components of the voivodship's economy. Within commercial offers of local companies one can also find various types of cements, door and window systems, hydraulic valves and fittings, as well as general construction works and installation. The greatest concentration of the companies from this sector can be found near Opole, Kędzierzyn-Koźle, Głubczyce and Krapkowice. Due to this geographical concentration, it is possible to build a complete house or a production hall with materials and services of the local companies beginning with the cement for the foundations and ending with the last tile or insulation panel.

The capital structure of the companies is variegated. In Opolskie voivodship there are subsidiaries belonging to international groups such as Heidelberg Cement, Monier, Velux or Lhoist and companies with mainly domestic capital like Stegu, Filplast, Elektromet, Galmet or Okpol. A large part of the local manufacturers are export oriented.

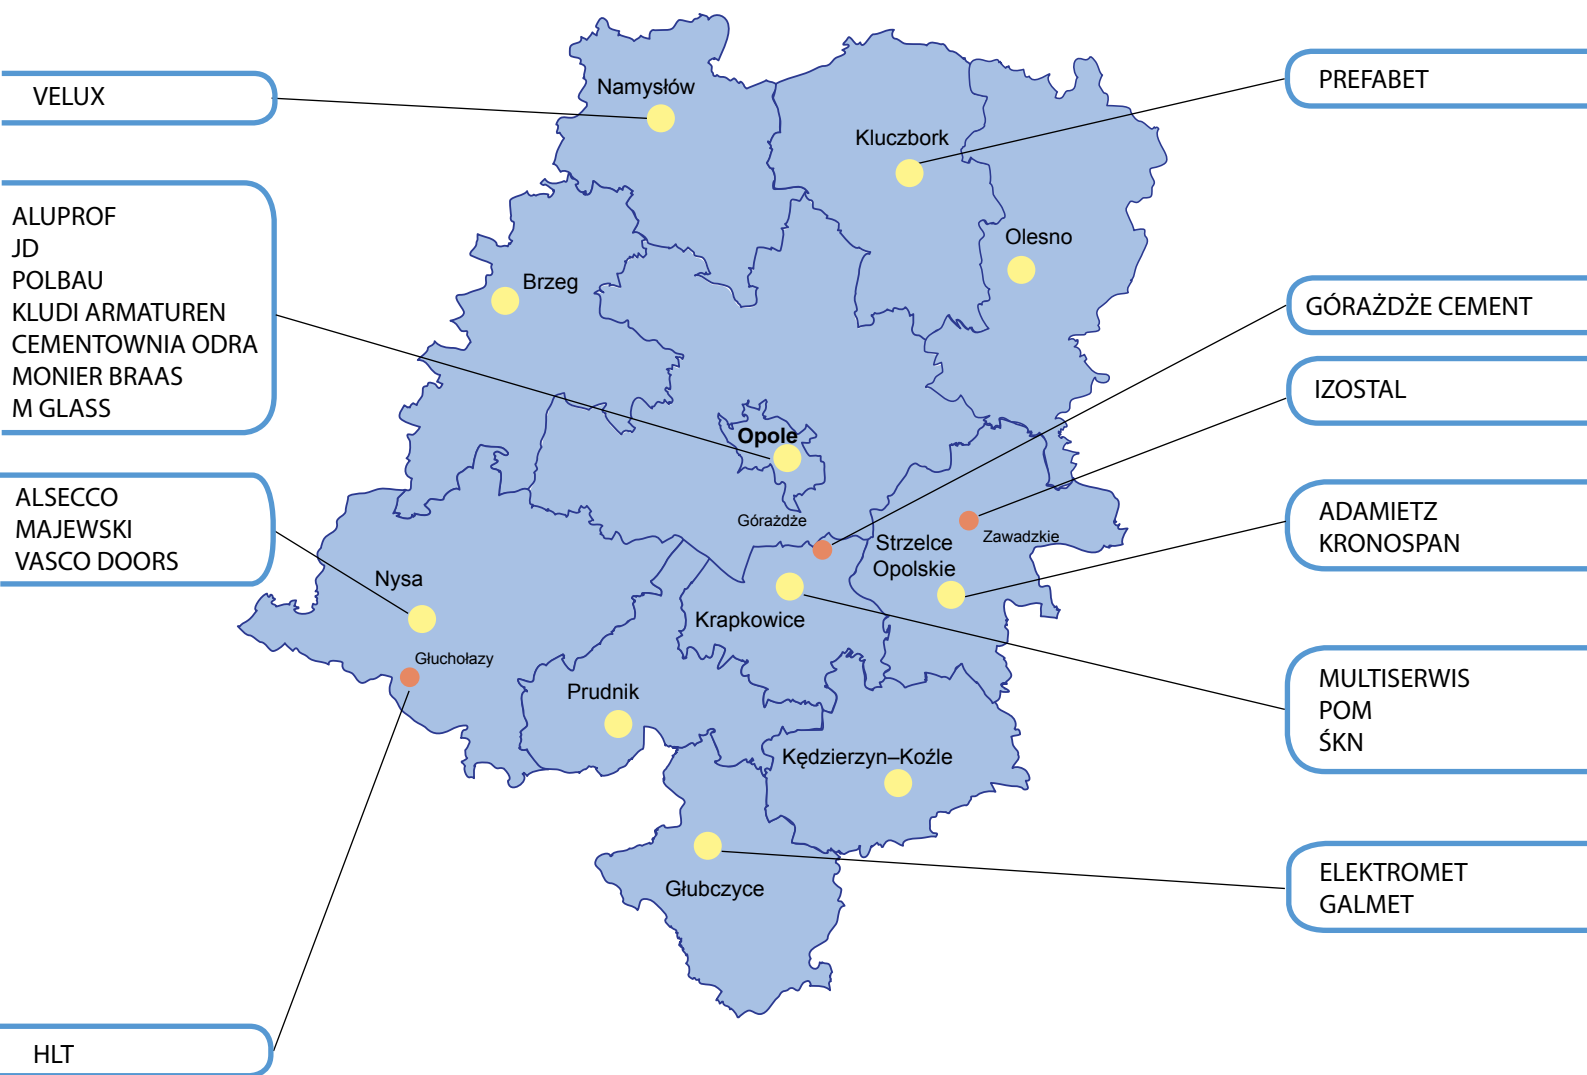

The construction sector in Opolskie voivodship is supported by a well-developed road and rail infrastructure, as well as by a favorable geographical location in the middle of Europe, which simplifies the logistics chain and reduces the cost of transporting the goods to customers.

The R&D support for the industry is secured by the Institute of Ceramics and Building Materials. The institution has its headquarters in Warsaw while in Opole the Department of Process Engineering of Building Materials is located. It works closely with representatives of the cement and lime industry, developing new technologies for construction materials involving waste materials. Other areas of research include reducing the energy consumption within the industry and eco-friendly technologies.
